

To Arrays:

* To declare the 2D arr.

```
int[][] arr = new int[size][size];
```

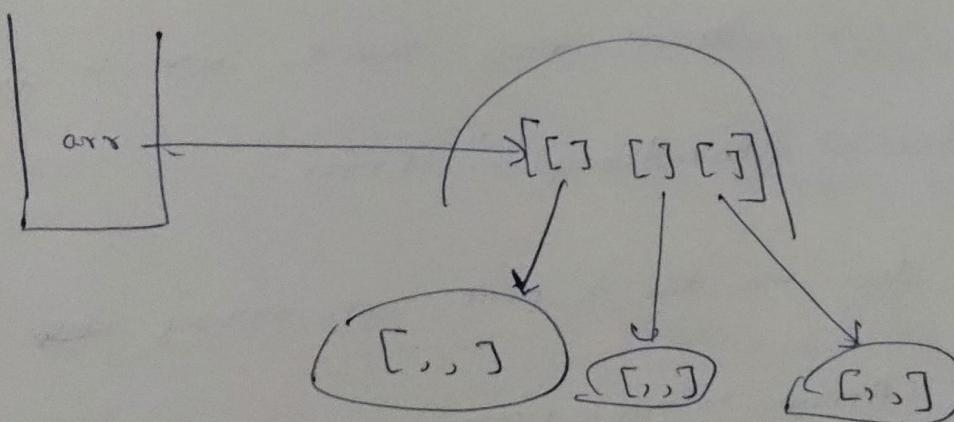

* Here no. of rows is mandatory while declaring

cols

* Use this method to declare and initialize.

```
int[][] arr = {  
    {1, 2, 3},  
    {4, 5, 6},  
    {7, 8, 9}  
};
```

* 2D is like an array of arrays.

* You can access elements like `arr[1][0] = 4,`

* In a 2D array column size may differ for rows but row size is fixed.

* If you `arr.length` for 2D array it only gives size of rows only.
