Variable Length Argument:

- If you want to pass more number of values to function

- You can declare function it like.

```
static void <name> (<type> ... <name>){

}
```

- If it is int it will get like array of integers.

Eg:-

```
pvsm (String[]args []) {
    fun (2, 3, 6, 8, 11);
}

static void fun (int ... v){
    Sout (Arrays.toString (v));
}
```

- Output: [2, 3, 6, 8, 11]

- If you are getting more input as parameters Argument. You should add variable length argument at last to avoid error.
